99,00 €

Functional and easy to use sound improvement!

Upgrade your Elemental or Essential turntable with Acryl it E. Acryl it E is made from acrylic with satinised surface and brings a more liquid sound that leaves no space for platter resonances.

The change is easily made: just exchange your metal platter for Acryl it E. Unlike many platters, where you will need to place a felt mat between record and platter to damp metal resonance, you can put your record directly on the acrylic surface, with nothing in-between. Acryl it E is able to improve overall performance significantly!
